

Blueprint Project Discovery Service

OVERVIEW

Blueprint's Professional Services offerings are designed to ensure the successful implementation and adoption of Blueprint Requirements Center into customers businesses. Experience has shown that companies that proactively drive product adoption through a coordinated strategy of training, mentoring and consulting services experience the greatest benefit and business value from their software investments. The overall goal is to help our customers maximize the return on their Blueprint investment while minimizing business interruption and risk.

Blueprint's consultants are requirements experts with extensive Requirements Center experience and detailed knowledge of requirements and SDLC processes, tools and best practices. Using Blueprint Professional Service's expertise ensures appropriate focus on efficient Requirements Center use and best practices, and provides a sustained post-training hands-on involvement to mitigate project risk and maximize adoption.

BLUEPRINT PROJECT DISCOVERY SERVICE

The introduction of new technology into any organization carries with it equal elements of excitement and risk. Excitement that the new technology will deliver business value and possibly transform the way the company is doing business, tempered by the risk that once the initial excitement wears off the software will become shelfware and the expected benefits are never realized. The Blueprint Project Discovery Service is designed to help Blueprint and our customers rapidly build a joint roadmap for success on the front-end of the project lifecycle in order to help mitigate risk and ensure project success.

The Discovery Service typically involves one Blueprint consultant on site for a period of 4-10 days, depending on the size and complexity of the project and the customer's requirements.

SOLUTION HIGHLIGHTS

The activities of the Discovery Service may include:

- High-level analysis of business initiatives, project initiatives, business and IT stakeholders, requirements documentation, Business Analysis personnel, etc.
- Determine the customer's current state of the Requirements Definition process and tooling environment. This includes:
 - Understand the types of projects on which Requirements Center will be used after product training is completed, and determine where these projects currently stand in the development lifecycle.
 - Understand the processes the teams follow while executing on these projects and the deliverables (BRD, Use Cases, Business Process Diagrams, etc.) produced along the way.

Blueprint Project Discovery Service

SCOPE

The Discovery and Initiation Service is typically performed at the customer site in a series of interviews and small group meetings. Follow up meetings and documentation can be conducted either on-site or remotely via web conferencing to best meet customer objectives and timelines.

The Discovery Service is the first step towards success with Requirements Center – let's get started!

Contact your Blueprint sales team for more information or to engage Blueprint Professional Services.

SOLUTION HIGHLIGHTS CONTINUED

- Understand organization and roles and responsibilities for team members in the organization.
- Understand and document the "to be" or desired state upon the implementation of Requirements Center within the identified project.
- Establish high-level plan for the Requirements Center implementation within the customer's project team that includes recommendations for training (both product and conceptual), installation, mentoring and additional consulting services.
